

# **DATABASE MANAGEMENT SYSTEMS PROJECT**

## **INVENTORY MANAGEMENT SYSTEM**

**Prepared By:**

Gaurav Chaudhary (Roll No. 21EEB0B23, Section: B)

---

### **Problem Statement**

Proper handling of stocks and inventories is imperative for any business to survive and operate. The entirety of retail and wholesale businesses depend completely upon balance between incoming and outgoing stocks/inventory. Inconsistent tracking, warehouse inefficiencies, unorganized data storages, miscalculations, incomplete product information are some of many issues that such businesses face

1

which potentially contributes to completely rupture in their supply-demand structure and their eventual collapse. Without exact information on existing inventory, businesses cannot take correct market decisions and risk over-stocking or under-stocking of inventories while being completely out of phase with the market.

Logically, goods based businesses require proper storage. These storage units

(warehouses) must store inventories in an efficient manner as well as provide all crucial information such as durability, expiry and quantity of these stocks. Lack of storage management systems happens to be one of the core problems of all scale businesses. Efficiency is key in shipping stocks out of or placing new stocks into the storage facility. Proper storage management systems in place would only handle the storage part of the business.

These businesses must also find proper markets to sell or trade their inventories. The demand and supply must be coherent with each other. The vulnerability of inventory based businesses has been well defined and exploited by the modern economy. Even though, from the customer's perspective, these markets are perhaps the most essential; they remain riddled with business-threatening issues within every aspect of it.

Inventory Management System tracks goods throughout the entire supply chain, from purchasing, storage to sales. The overall objective of inventory management is to achieve satisfactory levels of customer service while maintaining supply demand system efficiently. Guaranteeing inventory security while providing proper platform for consumer interactions must be the aim of these systems. After all, suppliers must be able to focus on customer orders with knowledge that the order corresponds to the availability of the products in the storage. This allows suppliers to focus on other important aspects of their business rather than worrying about only protecting the core of it. These systems are revolutionary to the business and perhaps the most important aspect of it.

This Inventory Management System will store information on the supplier. The supplier stores its inventories into the storage facility. The products are all accounted for and stored. The customers of these products connect with employees of the facility. The order details, bills and payment details are also stored into the

2

system. The supplier can not only have inventory security, but also direct contact with the consumers, allowing them to combine both sectors of the business and take correct decisions.

Such management system software are life lines for businesses to cling onto and utilize to its potentials in order to keep up in this modern cybernetic capitalism.

With information on all fronts of their business, these suppliers can also use statistical analysis tools for demand forecasting to maintain their supply-demand systems. Stock auditing can be performed on regular basis for accurate information.

## **CONTENTS**

- Tables
- ER Model Assumptions
- Functional Dependencies and Primary Keys
- Normalization
- ER Diagram
- Relational Schema with Normalized tables
- SQL Code

## **TABLES**

### **1) Customer**

<b>Attribute</b>	<b>Data Type</b>	<b>Constraints and Characteristics</b>
Customer_ID	VARCHAR2 (20)	Primary Key

3

Customer_name	VARCHAR2 (20)	Composite, Not Null
Customer_Phone_No	INT	Multi valued

Customer_E_mail	VARCHAR2 (20)	Not Null
Staff_ID	VARCHAR2 (20)	Foreign Key, Not Null
Order_ID	VARCHAR2 (20)	Foreign key, Not Null

## 2) Employee

Attribute	Data Type	Constraints and Characterstics
Employee_ID	VARCHAR2 (20)	Primary Key
Employee_Name	VARCHAR2 (20)	Composite , Not Null
Employee_Phone_No	INT	Multi valued
Employee_Type	VARCHAR2 (20)	Not Null
Employee_Scale	Char	Not Null
Employee_Title	VARCHAR2 (20)	Not Null

## 3) Order

Attribute	Data Type	Constraints and Characteristics
Order_ID	VARCHAR2 (20)	Primary Key
Staff_ID	VARCHAR2 (20)	Foreign key, Not Null
Customer_ID	VARCHAR2 (20)	Foreign Key, Not Null
Order_Details_ID	VARCHAR2 (20)	Foreign key, Not Null

## 4) Order Details

Attribute	Data Type	Constraints and Characteristics
Order_Details_ID	VARCHAR2 (20)	Primary Key

Order_Date	DATE	Not Null
Order_Bill_No	INT	Not Null
Order_Discount	INT	-
Order_Quantity	INT	Not Null
Product_ID	VARCHAR2 (20)	Foreign Key, Not Null

4

#### 5) Order Relationship

Attribute	Data Type	Constraints and Characteristics
Customer_ID	VARCHAR2 (20)	Foreign Key
Order_ID	VARCHAR2 (20)	Foreign Key

#### 6) Payment

Attribute	Data Type	Constraints and Characteristics
Payment_Bill_No	INT	Primary Key
Payment_Type	VARCHAR2(20)	Not Null
Payment_Due_Date	DATE	Not Null
Payment_Date	DATE	Not Null
Payment_Amount	INT	Not Null
Order_Details_ID	VARCHAR2 (20)	Foreign Key, Not Null

#### 7) Supplier

Attribute	Data Type	Constraints and Characteristics
Supplier_ID	VARCHAR2 (20)	Primary Key

Supplier_Name	VARCHAR2 (20)	Composite, Not Null
Supplier_Phone_No	INT	Multi valued
Supplier_Discount	INT	-
Supplier_Pay_Method	VARCHAR2 (20)	Not Null
Product_ID	VARCHAR2 (20)	Foreign Key, Not Null
Supplier_Total_Product	INT	Not Null

#### 8) Product

Attribute	Data type	Constraints and Characteristics
Product_ID	VARCHAR2 (20)	Primary Key
Product_Name	VARCHAR2(20)	Not Null

5

In_Stock	VARCHAR2(20)	Not Null
Product_Price	INT	Not Null
Product_Description	VARCHAR2 (20)	Not Null
Supplier_ID	VARCHAR2 (20)	Foreign key, Not Null
Category_ID	VARCHAR2 (20)	Foreign Key, Not Null
Order_Details_ID	VARCHAR2 (20)	Foreign key, Not Null

#### 9) Category

Attribute	Data Type	Constraints and Characteristics
Category_ID	VARCHAR2 (20)	Primary Key
Category_Name	VARCHAR2(20)	Not Null

Category_Description	VARCHAR2(20)	Not Null

Employee_ID	VARCHAR2 (20)	Primary Key
Phone_no	INT	Not Null

#### 12) Customer\_Phone\_No

Attribute	Data Type	Constraints and Characteristics
Customer_ID	VARCHAR2 (20)	Primary Key
Phone_no	INT	Not Null

6

#### 13) Supplies

Attribute	Data Type	Constraints and Characteristics
S_ID	VARCHAR2 (20)	Primary Key, Foreign Key
P_ID	VARCHAR2 (20)	Foreign Key

#### 14) Contains

Attribute	Data Type	Constraints and Characteristics
Product_ID	VARCHAR2 (20)	Foreign Key
Oder_details_ID	VARCHAR2 (20)	Foreign Key

### **ER-MODEL ASSUMPTIONS**

- A supplier can store any number of different products. The products are not unique to the supplier and any product can have more than one supplier.
- Each and every of these products must belong to one category only.  
However, each category can have any quantity of products.
- Each customer who visits the system must be accompanied by a facility employee. An employee can only issue product orders. The employee can serve any number of customers at any given time.
- Each employee can issue any number of customer's product orders. Each of these orders are unique and must be traced back to unique issuing employee.
- A customer is free to place any number of different orders into the system. Each order details must correspond to each customer.

7

- Each order has order details specific to it. The same order details can have more than one product.
- Each payment receipt will correspond to one set of order details. Similarly, each set of order details can produce one payment receipt.
- Each order details may contain any number of products, as per the demand. Similarly, any product can be present in any number of order details.

## **FUNCTIONAL DEPENDENCIES AND PRIMARY KEY**

### **• Customer**

Customer\_ID -> {Customer\_Name, Customer\_Email, Staff\_ID, Order\_ID}

Since all the fields depend on Customer\_ID, (Customer\_ID) + -> R.

Hence, Customer\_ID is Primary Key.

### **• Employee**

Employee\_ID ->

{Employee\_Name, Employee\_Type, Employee\_Scale, Employee\_Title}

Since all the fields depend on Employee\_ID, (Employee\_ID) + -> R.

Hence, Employee\_ID is Primary Key.

### **• Order**

Order\_ID -> {Staff\_ID, Customer\_ID, Order\_Details\_ID}

Since all the fields depend on Order\_ID, (Order\_ID) + -> R.

Hence, Order\_ID is Primary Key.

8

### **• Order Details**

Order\_Details\_ID ->

{Order\_Date, COrder\_Bill\_No, Order\_Discount, Order\_Quantity, Product\_ID}

Since all the fields depend on Order\_Details\_ID, (Order\_Details\_ID) + -> R.

Hence, Order\_Details\_ID is Primary Key.

### • Payment

Payment\_Bill\_No->

{Payment\_Type,Payment\_Due\_Date,Payment\_Date,Payemnt\_Amount,Order\_Details\_ID}

Since all the fields depend on Payment\_Bill\_No, (Payment\_Bill\_No)+ -> R.

Hence, Payment\_Bill\_No is Primary Key.

### • Supplier

Supplier\_ID ->

{Supplier\_Name,Supplier\_Discount,Supplier\_Pay\_Method,Product\_ID,Supplier\_Total\_Product}

Since all the fields depend on Supplier\_ID, (Supplier\_ID)+ -> R.

Hence, Supplier\_ID is Primary Key.

### • Product

Product\_ID ->

{Product\_Name,In\_Stocks,Product\_Price,Product\_Description,Supplier\_ID,Category\_ID,Order\_Details\_ID}

9

Since all the fields depend on Product\_ID, (Product\_ID)+ -> R.

Hence, Product\_ID is Primary Key.

### • Category

Category\_ID -> {Customer\_Name, Customer\_Description}

Since all the fields depend on Category\_ID, (Category\_ID)+ -> R.

Hence, Category\_ID is Primary Key.

- Supplier\_Phone\_No

Supplier\_ID -> {Supplier\_Phone\_no}

Since Supplier\_Phone\_No depend on the Supplier\_ID, (Supplier\_ID)+ ->

R. Hence, Supplier\_ID is Primary Key.

- Employee\_Phone\_No

Employee\_ID -> {Employee\_Phone\_no}

Since Employee\_Phone\_No depend on the Employee\_ID, (Employee\_ID)+  
-> R.

Hence, Employee\_ID is Primary Key.

- Customer\_Phone\_No

Customer\_ID -> {Customer\_Phone\_no}

Since Customer\_Phone\_No depend on the Customer\_ID, (Customer\_ID)+  
-> R.

Hence, Customer\_ID is Primary Key.

- Supplies

S\_ID -> {P-ID}

Since all the fields depend on S\_ID, (S\_ID)+ -> R.

Hence, S\_ID is Primary Key.

10

## **NORMALISATION**

- **Customer**

Primary key: Customer\_ID

Attribute Phone\_nois Multivalued hence has another table of its own so the table is in 1NF.

All attributes depend on the Customer\_ID, hence the table is 2NF. All attributes depend directly on Customer\_ID, hence the table is in 3NF.

All determinants (Customer\_ID) are candidate keys, hence the table is in BCNF.

#### • **Employee**

Primary key: Employee\_ID

Attribute Phone\_nois Multivalued hence has another table of its own so the table is in 1NF.

All attributes depend on the Employee\_ID, hence the table is 2NF. All attributes depend directly on Employee\_ID, hence the table is in 3NF.

All determinants (Employee\_ID) are candidate keys, hence the table is in BCNF.

#### • **Order**

Primary key: Order\_ID

All attributes depend on the Order\_ID, hence the table is 2NF. All attributes depend directly on Order\_ID, hence the table is in 3NF.

All determinants (Order\_ID) are candidate keys, hence the table is in BCNF.

### • **Order Details**

Primary key: Order\_Details\_ID

All attributes depend on the Customer\_ID, hence the table is 2NF. All attributes depend directly on Customer\_ID, hence the table is in 3NF.

All determinants (Customer\_ID) are candidate keys, hence the table is in BCNF.

### • **Payment**

Primary key: Payment\_Bill\_No

All attributes depend on the Payment\_Bill\_No, hence the table is 2NF.

All attributes depend directly on Payment\_Bill\_No, hence the table is in 3NF.

All determinants (Payment\_Bill\_No) are candidate keys, hence the table is in BCNF.

### • **Supplier**

Primary key: Supplier\_ID

Attribute Phone\_no is Multivalued hence has another table of its own so the table is in 1NF.

All attributes depend on the Supplier\_ID, hence the table is 2NF. All attributes depend directly on Supplier\_ID, hence the table is in 3NF.

All determinants (Supplier\_ID) are candidate keys, hence the table is in

BCNF.

• **Product**

Primary key: Product\_ID

All attributes depend on the Product\_ID, hence the table is 2NF. All attributes depend directly on Product\_ID, hence the table is in 3NF.

All determinants (Product\_ID) are candidate keys, hence the table is in BCNF.

• **Category**

Primary key: Category\_ID

All attributes depend on the Category\_ID , hence the table is 2NF. All attributes depend directly on Category\_ID , hence the table is in 3NF.

All determinants (Category\_ID) are candidate keys, hence the table is in BCNF.

• **Employee\_Phone\_no**

All attributes depend on the Employee\_ID , hence the table is 2NF. All attributes depend directly on Employee\_ID , hence the table is in 3NF.

All determinants (Employee\_ID) are candidate keys, hence the table is in BCNF.

• **Customer\_Phone\_no**

All attributes depend on the Customer\_ID , hence the table is 2NF. All attributes depend directly on Customer\_ID , hence the table is in 3NF.

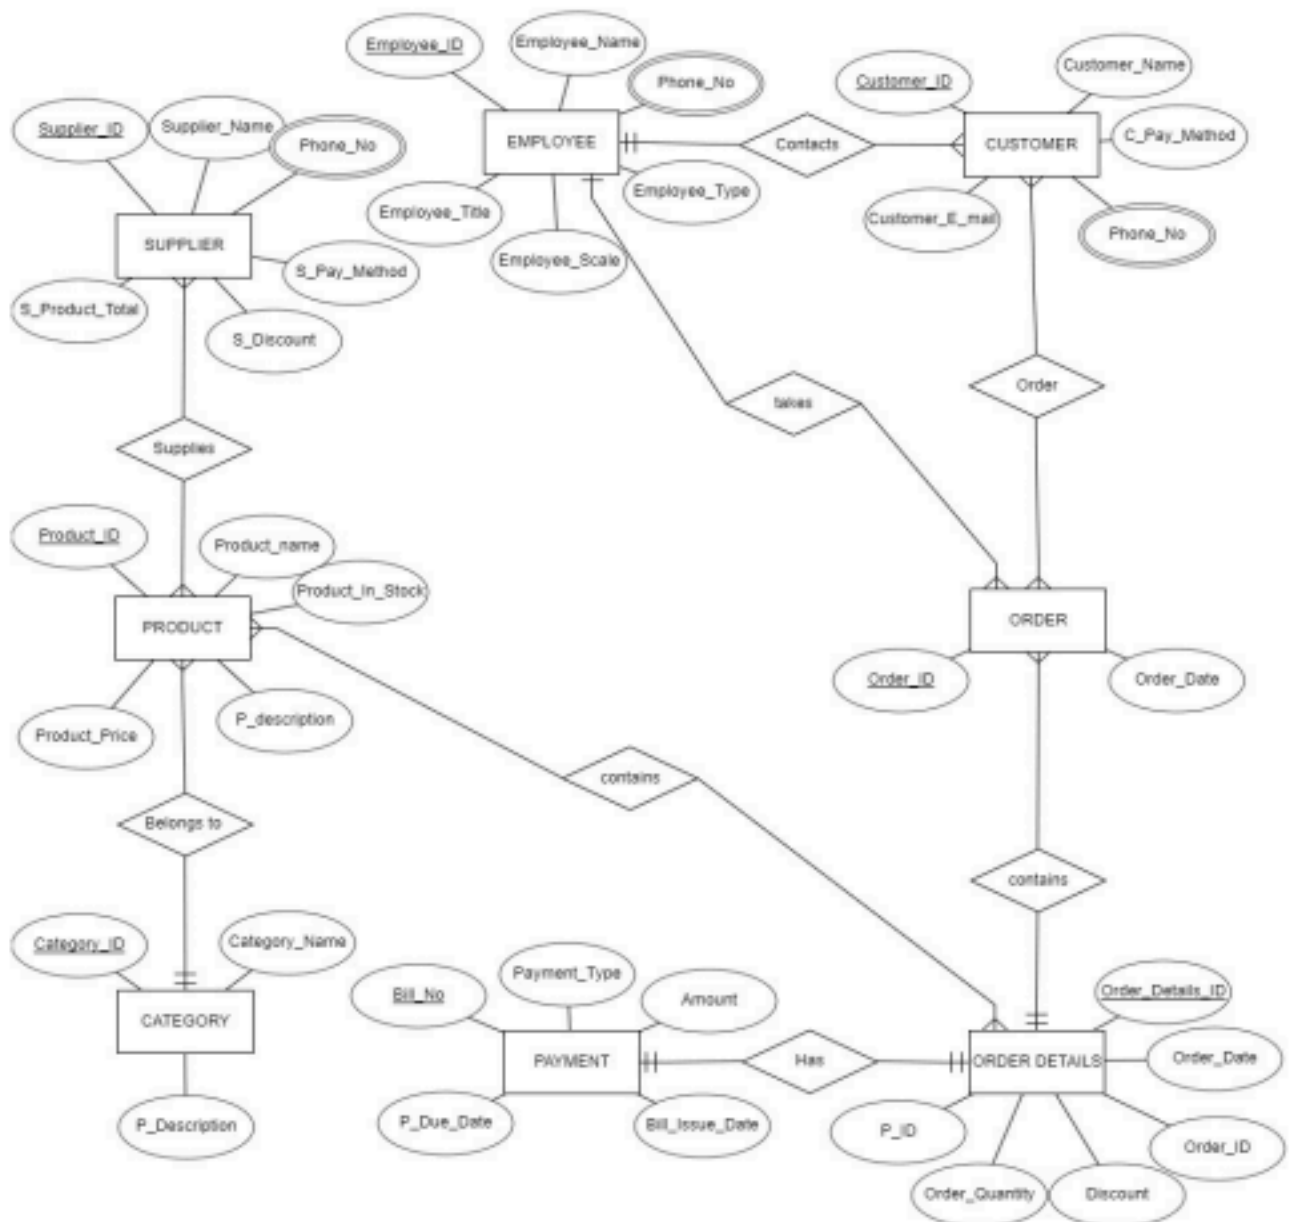

All determinants (Customer\_ID) are candidate keys, hence the table is in BCNF.

• **Supplier\_Phone\_no**

All attributes depend on the Supplier\_ID , hence the table is 2NF. All attributes depend directly on Supplier\_ID , hence the table is in 3NF.

All determinants (Supplier\_ID) are candidate keys, hence the table is in BCNF.
